

LNP Problem Identification and Management Scope

The LNPA WG is tasked with administration and tracking of LNP problems brought to this forum. The LNPA WG will not be responsible for resolving all LNP problems, but rather will be responsible for initially evaluating and categorizing submitted LNP problems, and either directly working on resolution of an issue or recommending the appropriate forum for resolution. The WG will report to the NANC on a regular basis on status of issues identified to the LNPA WG

The LNPA WG will take steps to track and document LNP problems submitted by service providers and/or vendors. The LNPA WG will take steps to inform and encourage a broad industry participation. The LNPA WG will classify the problems identified to facilitate resolution. Suggested categories include but are not limited to:

- Guideline
- Process problem
- Ordering issue
- NPAC functionality
- Education e.g., guideline/process exists but people don't understand/aren't following
- Switching/Signaling/Database
- Maintenance
- Additional categories to be determined by LNPA WG
