LNPA WG PARTICIPANTS ACTION ITEMS:

050713-01: It has been recommended that the capability for service providers to manage their own NPA-NXX filters not be included in the XML interface. This will be approved or disapproved at the July 2013 meeting. The recommendation is based on the fact that Neustar has been unable to identify any instances where service providers have used this feature in the CMIP interface. Service providers are to determine whether they ever use the SOA or LSMS to set their own NPA-NXX filters. Vendors are to determine whether or not their systems currently support this capability.

050713-02: Service providers are to be prepared to state their company positions on the **June 17, 2013, conference call** as to whether or not new service providers should be required to do turn up testing themselves (or through a surrogate) even though the same test plan will be used that the vendors used to do their testing. And if the vendor that does the vendor testing is also the surrogate for the service provider, does the test have to be repeated?

050713-03: Ron Steen is to update Best Practice 30 with the NPA split information. The updated information is to be sent to John Nakamura for posting on the website.

050713-04: Service providers are to be prepared to state their company positions at the July 2013 meeting as to whether or not BP 30 on NPA splits should be presented to NANC requesting their endorsement.

050713-05: Deb Tucker will research the porting flows and Best Practices to determine if changes are required by elimination of the 5-day first port interval.

050713-06: A cross reference field has been requested as part of NANC 449 implementation. It was suggested that the field be limited to 25 characters. Service providers are to be prepared to state their company positions as to whether or not this is the correct size at the July 2013 meeting.
